Github | LinkedIn: @crysawang

University of Maryland, College Park | B.S. Computer Science, Class of 2021

## – Work History –

### OpenStore / OpenDesk

Frontend Engineer

New York, New York

June 2024 - June 2025

- **Overhauled UI for the AI-powered customer service tool (OpenDesk)** by proactively gathering user feedback and acting as a customer service agent to identify friction points, resulting in a streamlined layout built using React, TypeScript, and Tailwind. These enhancements drove a **15% boost in agent efficiency** and supported our KR to improve agent productivity by 20% YoY.
- **Designed a responsive analytics dashboard** to replace Mode embedded reports with dynamic React and Nivo visualizations, backed by DataForge's powerful data transformations. **Page load times were reduced by 80%** and users were empowered to monitor the efficiency of their human and AI agents.
- **Led front-end development for the Customer Profile feature**, surfacing contextual data like order history, lifetime spend, and satisfaction scores, driving a **15% increase in customer satisfaction scores** and improving agent efficiency.
- **Jumped into Kotlin backend development** and learned on the fly during critical launch gates to unblock the team and ship high-priority features, helping the team hit 100% sprint completion.

### NerdWallet

Software Engineer II

San Francisco, CA (Remote)

February 2023 - June 2024

- **Collaborated with product team to A/B test** the marketing pages and credit card recommendations quiz, which were built with React, Redux, Material UI, and Typescript
- **Improved user engagement** by connecting marketing pages to an AWS Lambda function for determining credit card approval likelihood and displaying the calculated odds with a scale graphic
- **Piloted all React Native work for the team**, including the integration of the credit card recommendation quiz into the NerdWallet mobile app, **leading to an 85% increase in monetizing transactions**
- **Lead project to launch NerdUp–NerdWallet's credit card**–on web and mobile app user homepages, working cross-functionally to connect a third-party API to NerdWallet's federated GraphQL supergraph, React and React Native applications

Software Engineer I

August 2021 - February 2023

- **Refined the new credit card recommendations quiz** by overhauling backend logic, updating GraphQL schemas and re-designing the user experience, **increasing quiz revenue by 215%**
- **Implemented Segment analytics to track user's interactions**, and built Datadog metrics and alerts to monitor the health of the team's services, clients, and loading speeds
- Handled on-call duties as one of two primaries, managing high-urgency issues and deployment schedules

## – Projects –

### Personal Website

licorice-rabbit.vercel.app

Early 2024

- Created a personal website from using React, Typescript, CSS, and GSAP to showcase hobbies and general information with a retro-gaming theme

### Crypto Net Worth Integration for NerdWallet

Best in Show for NerdWallet's 2022 Hackathon

March 2022

- Built a Plaid-like modal for users to link their crypto wallets and exchanges to their NerdWallet account in order to offer a more holistic view of their portfolio value

## – Skills & Technologies –

**Skilled with** React, Next.js, Javascript, Typescript, HTML, CSS, Tailwind, Material UI, Chakra UI, Jest  
**Proficient with** Kotlin, Dataforge, Redux, Node.js, Datadog, GSAP
